

Flow-matching plan threading an obstacle cluster

NL: "Eventually, within the time bound, reach the goal beyond the cluttered room, while always keeping safe from every obstacle."

STL: $F_{[20, 55]}(\text{reach}) \wedge G \neg \text{unsafe} \quad \rho(G \neg \text{unsafe}) = +0.20 \text{ m}$ (TeLoGraF, flow+STLCG)
